

# ANDERSON HEIMAN

Anderson is recognized as a progressive veteran Democratic Finance Committee staffer and leader in tech policy circles - an increasingly unusual combination. He is a Senate veteran with deep policy expertise, and brings a full suite of tools for the use of Monument's clients.

Most recently, Anderson led Sen. Ron Wyden's (D-OR) technology team as Senior Advisor for Technology and Trade - the only tech team in the Senate. Senator Wyden considers technology issues a cornerstone of his policy agenda, and Anderson led this work that cut across a large number of issue areas. His team focused on everything from consumer privacy to government surveillance and encryption. His areas of special policy and political expertise lie in the conversations around intermediary liability and free speech online.

In 2018, he helped author and introduce Sen. Wyden's forward-leaning consumer privacy bill, which has been key in recent bicameral Democratic discussions around data collection, sharing, and use. Additionally, he led efforts to preserve Section 230 of the Communications Decency Act, the critical law that protects platforms from liability for user-generated content. In 2017, he helped coordinate efforts around reforming Section 702 of FISA, where Sen. Wyden played a key role by authoring the USA RIGHTS Act.

Prior to leading the Senator's tech work, Anderson was professional staff on the Finance Committee's trade team. In that role, he advised the Senator and the Finance Committee on a range of trade issues, including trade preferences and trade adjustment assistance, and he was in the trenches for the fight over Trade Promotion Authority in 2015. He joined the Finance Committee in 2012, under Sen. Baucus, where he was a tax policy analyst and advisor.

Anderson is a graduate of Brandeis University and the George Washington University, and lives with his wife, two daughters, and Toyota Corolla in Washington, DC.
